FUNCTION: Binds to the 23S rRNA (By similarity). SIMILARITY: Belongs to the L9P family of ribosomal proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      "Appendix to 'The complete DNA sequence of vaccinia virus'.";
Virology 179:517-563(1990).

    -!- FUNCTION: General late promoter trans-activator.
    -!- DEVELOPMENTAL STAGE: Intermediate stages of infection.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1.8%; Score 6; DB 1; Length 145; 100.0%; Pred. Anikeeva N.N., Vinogradova T.V., Votoshin O.N.;
Submitted (DEC-1985) to the EMBL/Genbank/DDBJ databases.
-!- FUNCTION: Produced by T-cells in response to antigenic or mitogenic stimulation, this protein is required for T-cell proliferation and other activities crucial to regulation of the immune response. Can stimulate B cells, monocytes, lymphokine-activated killer cells, natural killer cells, and glioma cells.
-: SUBCELLULAR LOCATION: Secreted.
-: SIMILARITY: Belongs to the IL-2 family.
                                                                                                                                                                                                                                                           Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

Can stimulate B cells, monocytes, lymphokineactivated killer cells, natural killer cells, and glioma cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  "Molecular cloning and expression of DNA encoding ovine interleukin

-!- FUNCTION: Produced by T-cells in response to antigenic or mitogenic stimulation, this protein is required for T-cell proliferation and other activities crucial to regulation of the immune response. Can stimulate B cells, monocytes, lymphokine activated killer cells, natural killer cells, and glioma cells (By

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                     -i- FUNCTION: Gas vesicles are small, hollow, gas filled protein structures that are found in several microbial planktonic microorganisms. They allow the positioning of the organism at the favorable depth for growth. GvpA type proteins form the essential core of the structure.

-i- SUBCELLULAR LOCATION: Gas vesicle membrane.

-i- SIMILARITY: Belongs to the gas vesicle protein type A family.

-!- FUNCTION: Component of the ubiquinol-cytochrome c reductase
complex (complex III or cytochrome b-cl complex), which is a
respiratory chain that generates an electrochemical potential
coupled to ATP synthesis (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SEQUENCE FROM N.A.

-!- FUNCTION: Participates in various redox reactions through the reversible oxidation of the active center dithiol to a disulfide. The F form is known to activate a number of enzymes of the photosynthetic carbon cycle (By similarity).
-!- SUBCELLULAR LOCATION: Chloroplast (By similarity).
-!- SIMILARITY: BELONGS TO THE THIOREDOXIN FAMILY. PLANT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Troukhan M., Alexandrov N., Lu Y.-P., Flavell R.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Brover V., Troukhan M., Alexandrov N., Lu Y.-P., Flavell Feldmann K.A.; "Full-length cDNA from Arabidopsis thaliana."; Submitted (MAR-2002) to the EMBL/GenBank/DDBJ databases.

                                                                                                                                                                                                                                                                                                                         J. Bacteriol. 185:2330-2337(2003).

-!- FUNCTION: Interacts with the secY protein in vivo. May bind preferentially to an uncomplexed state of secY, thus functioning either as a chelating agent for excess secY in the cell or as a regulatory factor that negatively controls the translocase function (By similarity).

-:- SUBCELBULAR LOCATION: Loosely associated with the cytoplasmic side
                                                                                                                                                                                                                                       STRAIN=TY2 / ATCC 700931;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This SWISS-PROT entry is copyright. It is produced through a collaboration
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      -I-FUNCTION: Interacts with the secy protein in vivo. May bind preferentially to an uncomplexed state of secy, thus functioning either as a chelating agent for excess secy in the cell or as a regulatory factor that negatively controls the translocase function (By similarity).

-I-SUBCELLULAR LOCATION: Loosely associated with the cytoplasmic side of the inner membrane, probably via secy (By similarity).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Mora-Garcia S.E.F., Rodriguez-Suarez R.J., Wolosiuk R.A.;
Submitted (Aug-1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Participates in various redox reactions through the reversible oxidation of the active center dithiol to a disulfide.
The F form is known to activate a number of enzymes of the photosynthetic carbon cycle (By similarity).
-!- SUBCELLULAR LOCATION: Chloroplast (By similarity).
-!- SIMILARITY: BELONGS TO THE THIOREDOXIN FAMILY. PLANT F-TYPE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

Mol. Evol. 42:422-431(1996).
-!- FUNCTION: Participates in various redox reactions through the reversible oxidation of the active center dithiol to a disulfide. The F form is known to activate a number of enzymes of the photosynthetic carbon cyole.
-!- SUBCELLULAR LOCATION: Chloroplast.
-!- SIMILARITY: BELONGS TO THE THIOREDOXIN FAMILY. PLANT F-TYPE.
                                                                                                                                                                                                                                                                                                                                                                                                  Thioredoxin F-type, chloroplast precursor (TRX-F).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gen. Genet. 258:363-372(1998).
FUNCTION: Involved in peptide bond synthesis. Stimulates efficient FUNCTION: Involved in peptide-bond synthesis on native or reconstituted 708 ribosomes in vitro. Probably functions indirectly by altering the affinity of the ribosome for aminoacyl-tRNA, thus increasing their reactivity as acceptors for peptidyl transferase (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        99XEMS.

                                                                                                                                                                                                                                                                                                                                                                                          PUNDA Res. 4:215-230(1997).

-!- FUNCTION: Participates in various redox reactions through the reversible oxidation of the active center dithiol to a disulfide. The F form is known to activate a number of enzymes of the photosynthetic carbon cycle (By similarity).
-!- SUBCELLULAR LOCATION: Chloroplast (By similarity).
-!- SIMILARITY: BELONGS TO THE THIOREDOXIN FAMILY. PLANT F-TYPE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MEDLINE=9233325; PubMed=1629697;

-!- FUNCTION: Links a guanosine 5' phosphate to molydopterin (MPT)
forming molybdopterin guanine dinucleotide (MGD) (By similarity).
-!- PATHWAY: Molybdenum cofactor biosynthesis.
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: Belongs to the mobA family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       STRAINE-NCTC 11168;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation-the European Bioinformatics Institute. There are no restrictions on its use by non-profit institutions as long as its content is in no way
               -!- FUNCTION: IGPS catalyzes the conversion of PRFAR and glutamine to IGP. AICAR and glutamate. The hish subunit provides the glutamine amidotransferase activity that pracduces the ammonia necessary to hisp for the synthesis of IGP and AICAR (By similarity).
-!- CATALYTIC ACTIVITY: 5- [(5-phospho-1-deoxyribhlos-1-ylamino)methylideneamino]-1-[-5-phosphoribosyl)imidazole-4-carboxamide + L-glutamine = imidazole-glycerol phosphate + 5-aminoimidazol-4-carboxamide ribonucleotide + L-glutamate + H(2)0.
                                                                                                                                                                                                                -1- PATHWAY: Histidine biosynthesis; fifth step.
-1- SUBUNT: Heterodimer of hisH and hisk [8] similarity).
-1- SUBCELLULAR LOCATION: Cytoplasmic [8] similarity).
-1- SIMILARITY: Contains 1 type-1 glutamine amidotransferase domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  STRAIN=S2886 / AB972;

                                                                                                                                                                                                                                                                                                                                                similarity).
SUBUNIT: Heterotrimer composed of an alpha, a beta and a gamma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Int. J. Biochem. Cell Biol. 34:1286-1290(2002).
-!- FUNCTION: Conjugation of reduced glutathione to a wide number of exogenous and endogenous hydrophobic electrophiles.
-!- CATALYTIC ACTIVITY: RX + glutathione = HX + R-S-glutathione.
-!- SUBUNIT: Homodimer.
-!- TISSUE SPECIFICITY: Liver, kidney, muscle, skin, lung and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    MEDLINE-22123471; PubMed-12127579; Bucciarelli F., Petruzzelli R., Bucciarelli T., Sacchetta P., Amicarelli F., Petruzzelli R., Melino S., Rotilico D., Celli N., Di Ilio C.; "Amino acid sequence of the major form of toad liver glutathione

Mankor T., Tabata S.;

Suginta M., Tabata S.;

"Sequence analysis of the genome of the unicellular cyanobacterium
Syncehocystis ap. strain PCC6803. I. Sequence features in the 1 Mb
region from map positions 64% to 92% of the genome.";

DNA Res. 2:153-166(1995).

-! GATALYTIC ACTIVITY: 1-(5-phospho-D-ribosyl)-ATP + diphosphate =
ATP + 5-phospho-alpha-D-ribose 1-diphosphate.

-! PATHWAY: Histidine biosynthesis; first step. Very important in the
regulation of histidine metabolism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SUBUNIT: Homohaxamer (By similarity). Binds to hisz possibly to allow the regulation of hisG transferase activity by histidine (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  PARTITION OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF THE PROPERTY OF T

EMBO J. 16:1992-2003(1997).

-1- FUNCTION: Required for the transcriptional activation of

middle promoters. Middle promoters are characterized by the

presence of the conserved sequence [AT]3TGCTINA (MotA box).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Transcription regulation; Activator; DNA-binding; 3D-structure. -1- FUNCTION: Involved in DNA repair and in homologous recombination.
May regulate the cleavage reactions of the branch-structured DNA.
Has a very weak ATPase activity that is not stimulated by DNA.
Binds DNA but does not promote DNA strands exchange (By

-: FUNCTION: Phosphorylation of dTMP to form dTDP in both de novo and
salvage pathways of dTTP synthesis (By similarity).
-: CATALYTIC ACTIVITY: ATP + thymidine 5'-phosphate = ADP + thymidine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

Has probably no oxalate oxidase activity even if the active site is conserved.
-!- SUBUNIT: Oligomer (believed to be a pentamer but probably hexamer)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PROBABLE NON-FUNCTIONAL MANGANESE-BINDING

-!- FUNCTION: May play a role in plant defense. Has probably no oxalate oxidase activity even if the active site is conserved.
-!- SUBUNIT: Oligomer (believed to be a pentamer but probably hexamer)
                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Arabidopsis thaliana (Mouse-ear cress).
